Division of Statistical and Historical Research. Compiled from reports of the Bureau of the Census.

¹ In addition 795,519 sheep, lambs, goats, and kids were slaughtered for others in 1914 and 269,128 in 1919. No corresponding data for 1909, 1921, or 1923.

² No data collected by Bureau of the Census for 1914, 1921, or 1923 on farm or retail slaughter.

³ No data obtainable for retail slaughter in 1919.

⁴ Included in "all other States."

Division of Livestock, Meats, and Wool. Production figures 1910-1913 from the National Association of Wool Manufacturers; 1914-1925 from the Division of Crop and Livestock Estimates; Imports and exports from the Bureau of Foreign and Domestic Commerce.

¹ Imports and reexports include hair of camel, goat, alpaca, etc. Imports of hair not separately stated prior to July 1, 1913; since that date it has constituted less than 2 per cent of the total every year except 1915, when it was 2.4 per cent.

² Exports for fiscal years ending June 30 of the years shown.

³ Included in all other articles.

⁴ No transactions.

Division of Statistical and Historical Research. Official sources except where otherwise noted. "Wools" in this table includes washed, unwashed, scoured, pulled wool, slip, and all other animal fibers included in the United States classification of wool. The following items have been considered as not within this classification: Carded, combed, dyed wool, fleeces; sheep, lamb, and goatskins with hair on, mill waste, matts, and tops.

- 1 Year beginning July 1.
- 2 International Institute of Agriculture.
- 3 Four-year average.
- 4 Twelve months' sea-trade, three months' land-trade
- 5 Three-year average.
- 6 Six months.
- 7 One year only.

Division of Statistical and Historical Research. Sources: Australia.—1909–1913 average production calendar years 1909–1911, and years ended June 30, 1913 and 1914. Years 1923 and 1924, Quarterly Summary Australian Statistics September, 1925. Year 1925, see note 1. Argentina.—1909–1913 exports, Buenos Aires, Aug. 19, 1913, quoting La Prensa Aug. 18, 1912. Year 1923, Argentine Ministry of Agriculture, Mar. 20, 1924. Year 1924, see note 2. Year 1925, see note 3. New Zealand.—Years 1909–1913, 1923, and 1924, Dalgity & Co. Year 1925, see note 4. United States.—Division of Crop and Livestock Estimates, Union of South Africa.—Average, 1909–1913. Exports, Sept. 1 to Aug. 30, 1909–1910 to 1913–1914. Years 1923 and 1924, exports, Sept. 1 to Aug. 30. Year 1925, see note 5. United Kingdom.—Average, 1909–1913, calendar years. Year 1923, Yorkshire Observer Trade Review, 1924. Year 1924, estimate of Minister of Agriculture in letter from assistant trade commissioner Jan. 6, 1925, page 3. Year 1925, Yorkshire Observer, Uruguay.—Average 1909–1913 and 1922 exports. Year 1924, Commerce Reports, Sept. 7, 1925. Year 1925, Acting Commercial Attaché Law B. Clark, Montevideo, Oct. 12, 1925, page 74. This estimate may be exceeded according to information received from Consul U. Grant Smith, Dec. 17, 1925. It may reach 125,000,000 pounds.

1 Based on increase in receipts of Australian wool into store from Oct. 1 to Dec. 31, 1925, compared with preceding year and information furnished by Trade Commissioner Babbitt as to the weight per bale. This estimate may be too high as information from other sources state that it is not wool that last year's figures will be exceeded to any extent.

2 Estimate based on 12 months exports October–September, stocks of unshipped wool on hand Sept. 24, 1925 and estimated home consumption.

3 Estimated from information furnished by Commercial Attaché Feely stating that clip was about the same as last year.

4 Estimate of Government statistician quoted by Vice Consul J. C. Hudson, Wellington, Feb. 2, 1926. The vice consul states that this is a little too high and is more likely to be 30,000,000 to 35,000,000 pounds less than last year.

5 Estimate based on estimated increase over preceding year.

Division of Statistical and Historical Research. From the Yorkshire Observer "Trade Review" of 1922 for 1909-1922; subsequently from annual issues of that publication. Converted at par prior to 1912; after 1911, converted to cents per pound on the basis of the monthly average rate of exchange as given in Federal Reserve Bulletins.

¹ First shorn fleeces, but not lambs' wool.

² Period of price control. Approximate issue prices: 1917, 50 cts.; 1918, 55 cts.; 1919, 46-48 cts.

³ Includes all fleeces shorn after the first.

Division of Statistical and Historical Research. Compiled from Monthly Summary of Foreign Commerce of the United States, June, 1925.

¹ Jan. 1-June 30.

¹² Included with Vegetable products, "Other, n. e. s."

¹³ July 1-Dec. 31.

¹⁴ Reported in value only.

¹⁵ Classified as Railroad ties, "Softwood."

¹⁶ Classified as Timber, sawed, Douglas fir, "Treated," and "Untreated."

¹⁷ Classified as Timber, sawed, "Douglas fir."

¹⁸ Classified as Timber, sawed, Southern yellow pine, "Treated," and "Untreated."

¹⁹ Classified as Timber, sawed, "Southern yellow pine."

²⁰ Classified as Miscellaneous forest products, "Veneers" and "Plywood."

²¹ Includes "Alcohols" or "Other alcohols, pure and denatured," and "Methanol, pure and denatured."

Division of Statistical and Historical Research. Compiled from Foreign Commerce and Navigation of the United States, 1900-1918, and Monthly Summary of Foreign Commerce of the United States, June issues, 1920-1925. All values are gold.

¹Not including forest products.

²Preliminary.

FARM MANAGEMENT AND COSTS STATISTICS

TABLE 652.—Farm business surveys: Summaries of 71,515 farm records from 435 localities in 45 States, 1907-1924

This table presents some results, in terms of averages per farm, from most of the farm business surveys and farm account books kept by farmers that have been made in the United States from 1907 to 1924. It includes essentially all the leading types of farming. The studies were made either singly or cooperatively in some form by the United States Department of Agriculture, and the agricultural colleges and experiment stations.

EXPLANATION OF TERMS

Capital.—The value of all real estate, machinery, livestock, and other property used to carry on the year's business. It includes the value of the farm dwelling, but not of the household furnishings.

Receipts.—Proceeds from the sale of crops produced during the farm year, the increase from livestock, and the receipts from work off the farm, rent of buildings, etc. The increase from stock is found by subtracting the sum of the amount paid for stock purchases and the inventory value at the beginning of the year from the sum of the receipts from livestock products, sales of livestock, and the inventory value at the end of the year. Receipts do not include the family living from the farm.

Expenses.—Annual expenditures made in carrying on the farm business. They include depreciation on buildings and equipment, and the unpaid labor performed by members of the farm family, but do not include the farmer's own labor, or any household and personal expenses.

Farm income.—The difference between receipts and expenses. It does not include the family living from the farm.

Labor income.—Farm income less 5 per cent interest charge for the use of the capital. It does not include the family living from the farm. In some of the studies, as originally published, other rates of interest were used.

Returns to capital.—The rate returned to the capital after the farmer's labor is deducted from the farm income.

Labor income represents what the farm has earned from the year's business for the labor and management of the farmer after a charge of 5 per cent has been deducted for the use of the capital, while return to capital represents what the farm has earned from the year's business for the capital used after a charge has been deducted for the labor and management of the farmer.

Family living from the farm.—The food products set aside from the year's production, and the fuel, and house rent furnished by the farm for the living of the family living from the farm.

Farmer's labor.—An allowance for the farmer's own labor and management at the rate he would have to pay another man to take his place. It does not include the family living from the farm.

Other unpaid family labor.—The unpaid family labor other than the labor of the farmer himself determined on the basis of what it would cost to have the same work done by hired labor, or on the amount of additional labor that would need to be hired to carry on the same sized business if the family labor had not been available.

Principal sources of receipts.—These are named in order of importance and in most instances, include all those amounting to 5 per cent or more of the total receipts. Under this heading cotton includes sales of cottonseed; poultry includes sales of eggs; sheep includes lambs and wool; horses includes mules and colts; work off the farm includes man, man and team, and machine work; wood lot includes sales of timber, lumber, posts, firewood, etc. Cattle does not include sales of dairy products.

Cost of Production Division. From returns to mail inquiry sent to crop reporters.

¹ Includes miscellaneous labor, irrigating and water, seed treatment, and material.

² Seeds and twine, crop insurance, use of implements, use of storage buildings, and overhead.

³ The total includes 24 records from the following States in which there were not enough reports to show State averages: Maine, Vermont, Delaware, Alabama, and Arizona.

TABLE 667.—Wheat: Cost of production, by yield groups, 1924

Cost of Production Division. From returns to mail inquiry sent to crop reporters.

¹ Includes miscellaneous labor, irrigating and water.

² Sacks and twine, crop insurance, use of implements, use of storage buildings, and overhead.

³ The total includes 91 records from the following States in which there were not enough reports to show State averages: Maine, New Hampshire, Massachusetts, Rhode Island, Utah, Washington, and California.

TABLE 670.—*Corn: Cost of production, by yield groups, 1924*

| Yield group (bushels per acre) | Num- ber of reports | Aver- age acreage in corn per farm | Aver- age yield per acre | Gross cost per acre | | | | | | | | Credit per acre (stover and fodder) | Net cost | | | |

Cost of Production Division. From returns to mail inquiry sent to crop reporters.

¹ Includes miscellaneous labor, irrigating and water, seed treatment and material.

² Seeds and twine, crop insurance, use of implements, use of storage buildings, and overhead.

³ The total includes 66 records from the following States in which there were not enough reports to show State averages: New Hampshire, Massachusetts, Connecticut, Florida, Louisiana, New Mexico, Arizona, and California.

| Return to operator (family labor at hired labor rates) ⁶ | 390 | 306 | 117 | 162 | 27 | 178 | 472 | 39 | 134 | 483 | 94 | 308 | 71 | 215 |

Division of Farm Management and Costs. Computed from reports of owner operators (16,183 in 1923 and 15,103 in 1924) and other information. In computing this table certain arbitrary assumptions are explicitly or implicitly made.

¹ Averages of estimates made by 15,025 farmers for 1923; by 13,753 farmers for 1924.

² Averages of estimates made by 11,832 farmers for 1923; by 12,133 farmers for 1924.

³ Based on the reported value of farm property Jan. 1.

⁴ Many recall paying more than 6 per cent.

⁵ Assumes that all unpaid family labor shared the reduced amount according to the amount of its claim established: (1) For the operator, as 12 times the monthly wages of hired help without board, and (2) for the rest of the family the difference between operator's labor so figured and the reported value of unpaid labor.

⁶ The assumption is that the operator bears all the burden of failure to earn common hired labor wages, and attributes such wages to his family before computing his remainder or wages.

TABLE 682.—*Plow lands: Value per acre, by States, 1920-1925*

Division of Crop and Livestock Estimates.

¹ Yearly averages are from reports by crop reporters, giving average wages for the year in their localities.² This column has significance only as an essential step in computing the wage index.³ Years 1866 to 1876 in gold.⁴ 1877 or 1878, 1878 or 1879 (combined).⁵ Weighted average quarterly, April (weight 1), July (weight 5), October (weight 5), and January, 1925 (weight 1).

Division of Crop and Livestock Estimates. Estimated total acreage of 19 crops—corn, wheat, oats, barley, rye, buckwheat, potatoes, sweet potatoes, tobacco, flax, rice, all hay, cotton, peanuts, kafirs, beans, broomcorn, hops, and cranberries.

¹ Based on census proportions in 1919.

² Not including cotton grown in Lower California, Mexico.

¹ The sales statistics for 1921 relate exclusively to complete machines and were compiled almost wholly from returns made by 427 establishments classified in the "agricultural implements" industry. No sales data were collected for that year from establishments manufacturing gas tractors, horse-drawn vehicles, barn equipment, and miscellaneous farm equipment.

Division of Statistical and Historical Research. Data for 1920 compiled from reports of the Bureau of Public Roads. Data for 1921-1924 compiled from reports of the Bureau of the Census.

¹ The sales statistics for 1921 relate exclusively to complete machines and were compiled almost wholly from returns made by 427 establishments classified in the "agricultural implements" industry. No sales data were collected for that year from establishments manufacturing gas tractors, horse-drawn vehicles, barn equipment, and miscellaneous farm equipment.

² Figures for 1921 relate to barn equipment only. No data for 1920.

Division of Land Economics. Compiled from the Bureau of the Census reports; 1924 figures preliminary.

1 Acreage of harvested crops for 1919 is the total of the individual crops with allowance for duplication of corn for forage with corn for grain; for 1924 the figures are the results of a direct census inquiry.

2 Less than one acre.

TABLE 709.—*Pasture land: Acreage in farms, 1924*

Division of Farm Population and Rural Life. Compiled from reports of Bureau of the Census.

¹ Definition of farm population as used in these tables: (1) All persons living on farms, without regard to occupation; (2) all those farm laborers (and their families) who, while not living on farms, nevertheless live in strictly rural territory, outside the limits of any incorporated place.² Definition of rural population: All persons other than those who are urban.³ Definition of urban population: All persons living in places of 2,500 population and more.⁴ Less than one-tenth of 1 per cent.TABLE 720.—*Farm population and other population, summary, United States, 1920*

| Item | Number | Percentage of total population |
|---|-------------|--------------------------------|
| Farm population | 31,614,269 | 29.9 |
| Farm population in rural territory | 31,358,640 | 29.66 |
| Farm population in urban territory | 255,629 | .24 |
| In cities and other incorporated places of 25,000 and over | 82,965 | .08 |
| In cities and other incorporated places of 10,000 to 25,000 | 96,191 | .09 |
| In cities and other incorporated places of 2,500 to 10,000 | 166,543 | .16 |
| Rural population | 51,406,017 | 48.6 |
| In incorporated places of less than 2,500 inhabitants | 8,969,241 | 8.5 |
| In unincorporated territory | 42,436,776 | 40.1 |
| Urban population (living in cities and other incorporated places of 2,500 inhabitants and over) | 54,304,603 | 51.4 |
| Total population | 105,710,620 | 100.0 |

Division of Farm Population and Rural Life. Compiled from Bureau of the Census reports. See footnotes to Table 719.

TABLE 721.—Farm population and other population, by place of residence, by States, 1920

| State | Farm population | | | | Urban population (in cities and other incorporated places of 2,500 and over) | Total population | |
|---------------------------|--------------------|--|---|------------|---|---------------------|--|
| | In rural territory | | In cities and other incorporated places of 2,500 and over | Total | | | |
| | Number | Per cent of rural popu- lation | | Number | | | Per cent of total popu- lation |

Division of Statistical and Historical Research.

These relatives are based on the average of the monthly rates in effect during the crop year. Rates in effect in 1913 equal 100.

¹ These rates in effect up to Dec. 1.² Based on local rates from Larimore, Leal, Makota, N. Dak., Groton, S. Dak., Scobey, Mont., and Osakis, Minn., to Minneapolis, Minn. The same rates apply to Duluth except from Groton, S. Dak., and Osakis, Minn. No proportional rates available.³ Based on local rates from Colfax, Wash., to Portland, Oreg., Moscow, Idaho, to Seattle, Wash., and Pendleton, Oreg., to Portland, Oreg. No export rates available.⁴ Based on local rates from Minden, Nebr., Wray, Colo., Brewster, Kans., Great Bend, Kans., Hutchinson, Kans., and Cherokee, Okla., to Kansas City, Mo.; Marshall, Mo., to St. Louis, Mo.; LaPrairie, Ill., to St. Louis, Mo.; and export rates from Wichita, Kans., to Galveston, Tex.; and Enid, Okla., to New Orleans, La.⁵ Based on all rates named in note 4 except the rate from LaPrairie, Ill., to St. Louis, Mo.⁶ Based on all rates named in note 4 except rate from LaPrairie, Ill., to St. Louis, Mo., and the export rates from Wichita, Kans., to Galveston, Tex., and Enid, Okla., to New Orleans, La.

TABLE 727.—Wheat: Freight rates to specified destinations from selected points of origin, 1913-1925

Division of Statistical and Historical Research.

* International Yearbook of Agricultural Statistics, 1921, pages 504 and 498. Federal Reserve Bulletin, July, 1921, to date. Sight drafts 1912-1920; cables 1921 to date.

* Federal Reserve Board Bulletin, quoting Statistisk Aarbog, July, 1914, to December, 1919, and their own monthly averages since January, 1920. Quotations at New York on Copenhagen are not available throughout the period, but the shift in sources does not result in any considerable discrepancy. For the calendar year 1920, for example, the Copenhagen quotations on New York show the krone as equivalent to 15.43 cents while the New York quotations on Copenhagen average 15.63 cents per krone.

Bureau of Public Roads.

A few States did not report 1924 data. Latest available information has been used, the year being indicated in first column.

* Sand-clay included with gravel.

* Wood plank road.

TABLE 753.—Highway expenditures of State and State-controlled funds, 1924

Bureau of Public Roads.

The disbursements shown above, in general, cover money spent on State roads; in some States country-road work is supervised by State highway department.

- 1 On retirements and sinking funds.
- 2 Includes repairs, rentals, and purchases.
- 3 Includes reimbursements to counties, towns, etc., purchases of right of way and traffic control (policing and signs).
- 4 Consists of \$300,000 to counties and \$38,187 for purchase of right of way.
- 5 On primary road bonds issued by counties.
- 6 Maintenance of roads by counties total \$2,993,039.
- 7 County transfers, \$372,221, and purchase of right of way \$5,200.
- 8 Out-land warrants on road fund, \$11,072,321.
- 9 Engineering included in construction and maintenance.
- 10 Included in construction and maintenance.
- 11 Payment from highway reimbursement funds on county bond obligations assumed by State.
- 12 Includes \$462,339 for purchase of right of way and \$2,036,763 for county reimbursement.
- 13 Administration only as engineering is included with construction and maintenance.
- 14 Includes \$100,000 for purchase of right of way (toll bridge), \$3,115,169 on county roads and \$497,228 on town roads.
- 15 Excludes expenditures on market roads and forest-aid roads.
- 16 Includes \$314,601 traffic control, and \$1,296,632 transfer for township reward.
- 17 Includes \$1,442,628 for expenses motor vehicle registration.
- 18 State bridge fund receipts and disbursements not included.
- 19 Forest-aid road expenditures not included.
- 20 Included in construction and maintenance.
- 21 Deficit in one State of \$5,123,945 allowed for in this total.

TABLE 754.—Highway expenditures by counties, townships, and districts, 1924

Bureau of Public Roads.

Above data are partly estimates and approximations, but are only available figures obtainable by this bureau.

1 Bond interest often included with payments on principal.

2 Estimates based on 1923 data.

3 Estimated from 1924 road program.

4 Estimated from mileage built.

5 In only a few States are balances dependable.

6 The figures in parentheses are apparent deficits and the total is a net unexpended balance.

7 Made up from detailed data and nondetailed estimates.

8 Only 20 States show county overhead expenses.

TABLE 755.—Sources and amounts of State and State-controlled funds for highways, 1924

| State | Fiscal year ends | Balance at beginning of year | Percent- age of total funds | Total income during year | Percent- age of total funds | State highway bonds, notes, etc., sold | Percent- age of total funds | State tax levied for highways, etc. | Percent- age of total funds | Appropriation by State for highways | Percent- age of total funds |

Bureau of Public Roads. Above funds, generally, cover money applied to financing State roads; in some States county road work is supervised by State highway department.

- ¹ Gasoline tax, all to county for road maintenance, \$1,635,924.
- ² Used to retire State highway bond issues.
- ³ Gasoline tax includes \$126,326 from inspection fees of one-eighth cent per gallon.
- ⁴ No gasoline tax in 1924.
- ⁵ Includes \$1,119,542 from inheritance taxes.
- ⁶ Includes over \$2,000,000 of 1923 collections.
- ⁷ For county roads.
- ⁸ Receipts from county bond sales for trunk highway fund included among funds transferred from counties.
- ⁹ Includes \$42,120 from Federal Government for oil royalties.
- ¹⁰ Motor vehicle funds to counties.
- ¹¹ All tax collected to State general fund.
- ¹² Expended by counties under regulation of State highway commission.
- ¹³ Excludes market road and forest-aid road income.
- ¹⁴ Gasoline tax receipts distribution, 25 per cent to county roads and 75 per cent to State general fund.
- ¹⁵ Includes transfer of \$190,000 from bond interest and sinking fund.
- ¹⁶ Receipts for 15 months, July 1, 1923, to Sept. 30, 1924.
- ¹⁷ Includes \$1,324,669 from oil royalties (Federal mineral leasing act).

Bureau of Public Roads.

Above data are partly estimates and approximations, but are the only available figures obtainable by this bureau.

¹ Estimates based on 1923 data.

² Estimated from 1924 road program.

³ Estimated from mileage built.

⁴ Made up from detailed data and nondetailed estimates.

⁵ This balance is probably understated, as most counties do not record balances or deficits: The balances being added to general fund and the deficits being covered from same fund.

TABLE 757.—Gasoline taxes, 1924

Bureau of Public Roads.

¹ In some cases the distribution in amounts and percentages do not balance. Cost of collection and refunds for gasoline used for other purposes than for motor vehicles may account for the differences in some States.

² Data given cover calendar years, except for the following States, where fiscal years end as shown: California, Jan. 31; Connecticut, June 30; Mississippi, South Carolina, Utah, and Vermont, November 30.

³ Balance.

⁴ To date in 1925, these States enacted new gasoline tax rates effective as follows: Kansas, 2 cents (May 1); Michigan, 2 cents (Feb. 15); North Carolina, 4 cents (Mar. 6); Tennessee, 3 cents (Feb. 9); Wyoming, 2½ cents (March).

⁵ This percentage became effective when the tax rate changed as shown here.

⁶ Approximate.

TABLE 758.—Motor vehicles: Registration, licenses, and revenues, 1924

| State | Individually and commercially owned | | | | Official cars and trucks owned by State, etc. ¹ | Motor-cycles | Registration fees, licenses, permits, etc. | | Amount of registration fees paid for | | Grand total motor cars 1923 | Increase during 1924 |

Bureau of Public Roads.

¹ Net number of cars and trucks shown when possible, excluding reregistrations and nonresident registrations. Federal, State, or other Government-owned cars and trucks, not registered and not paying licenses, are also excluded in grand totals, unless noted.

² Recorded in private cars and trucks.

³ Not separately recorded.

⁴ "Motor trucks" includes solid and pneumatic types, also taxis, busses, etc.

⁵ Included with private passenger cars.

⁶ Reregistrations included, but nonresident excluded.

⁷ Approximate.

⁸ City cable excluded.

⁹ State-owned cars only.

¹⁰ First six months of registration year only.

¹¹ Excludes cost of motor registration department.

¹² To be expended by counties under general regulation made by State highway department.

¹³ Includes nonresident registrations.

Forest Service. Compiled from report on Senate Resolution 311 and "Forest Resources of the World."

¹ Alaskan areas are not tabulated because so little is known of the interior forests that the best estimates are only approximations. The figures now commonly used indicate 65,000,000 acres of coniferous forest and 5,000,000 acres of hardwoods. The bulk of the merchantable timber is confined to a belt along the coast of the southeastern part of the Territory, containing approximately 5,000,000 acres of forest.

² The areas given in this table refer only to land capable of producing saw timber or pulp timber in commercial quantities, and do not include the open woodland and chaparral of the Southwest.

³ New England: Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island.

⁴ Middle Atlantic: New York, Pennsylvania, New Jersey, Delaware, Maryland, District of Columbia.

⁵ Lake: Michigan, Wisconsin, Minnesota.

⁶ Central: Ohio, Indiana, Illinois, Iowa, West Virginia, Kentucky, Missouri, Tennessee.

⁷ South Atlantic and East Gulf: Virginia, North Carolina, South Carolina, Georgia, Alabama, Florida.

⁸ Lower Mississippi Valley: Mississippi, Louisiana, Arkansas, Texas, Oklahoma.

⁹ Rocky Mountain: Montana, Idaho, Wyoming, Nevada, Utah, Colorado, Arizona, New Mexico.

¹⁰ Pacific: Oregon, Washington, California.

Forest Service.

¹ Few, if any, of the public forests are entirely covered with saw timber.² Net area as of June 30, 1925. These figures do not, of course, include the forested land within Indian reservations, national parks, national monuments, some military reservations, and the unreserved public domain.³ Mostly marsh, game preserves, and public shooting grounds.⁴ Of this, 77,000 acres is State swamp land.⁵ Described as "forest and park" land.⁶ Practically all villages and cities have forested areas or parks for recreation.⁷ Net area as of Dec. 31, 1924.

¹ Woodland comprises all farm woodlots, natural or planted, and cutover land with young growth. It excludes lands covered with chaparral or woody shrubs.² Timberland is that part of the total forested area on farms which is covered with trees mostly of saw-log sizes.³ See South Dakota.⁴ Figures for Dakota Territory.

Forest Service.

¹ It is impossible to obtain accurate figures for areas planted by agencies other than the Federal Government or the States. The best estimates have been used. They came from State foresters, State colleges, and agricultural experiment stations, and from reliable local sources.

¹ Considerable planting in Michigan of which there is no record.

TABLE 770.—National forests: Fires: Number by location, causes, and classification, by cost of suppression and damage, 1925

Forest Service. Averages of recent years.

¹ Based on values of approximately 1919, milled products at the mill, fuel at point of production, all others at point of consumption except exports (declared valuation).² These figures express mainly that part of the damage done by fire which can be readily stated in dollars, namely, the loss of merchantable timber. Other damages suffered are the loss of young growth and forage, the injury of trees, resulting in admitting the inroads of insects and disease, the deterioration of forest types resulting from the decrease of valuable species which are sensitive to fire, accelerated run-off followed by soil erosion and irregular stream flow, destruction of animals, fish, and birds, and the prevention of recreational uses. One of the most menacing features of the present forest situation is the lowered productivity of forest soils, sometimes amounting to absolute sterility, which results from the action of fire.

Forest Service. Compiled from Bureau of the Census reports.

Regions.—Northeastern: Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

Central: Illinois, Indiana, Kentucky, Missouri, Ohio, Tennessee, West Virginia.

Southern: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Oklahoma, Texas.

North Carolina pine: North Carolina, South Carolina, Virginia.

Lake: Michigan, Minnesota, Wisconsin.

North Pacific: Oregon, Washington.

South Pacific: California, Nevada.

South Rocky Mountain: Idaho, Montana.

North Rocky Mountain: Arizona, Colorado, New Mexico, Utah, Wyoming.

Prairie: Iowa, Kansas, Nebraska, North Dakota, South Dakota.

¹³ Includes "All other."

Bureau of the Census and Forest Service.

* Included in "all other."

* Includes Delaware, Illinois, Indiana, Maryland, South Carolina, and Texas.

* Includes Delaware, Maryland, South Carolina, and Texas.

* 4,117 tons of unclassified pulp not included.

* Not reported by States.

* Total includes screenings.

* Included in California.

* Includes Delaware, Georgia, Louisiana, Maryland, Mississippi, South Carolina, and Texas.

* Includes Delaware, District of Columbia, Georgia, Louisiana, Maryland, Mississippi, South Carolina, Tennessee, and Texas.

* Includes Delaware, District of Columbia, Georgia, Louisiana, Maryland, Mississippi, North Carolina, Ohio, South Carolina, Tennessee, Texas.

Forest Service. Compiled from census publications. Calendar years except as otherwise noted. Additional production of turpentine distilled from wood in 1923 was 2,607,364 gallons. Additional production of rosin distilled from wood in 1923 was 200,778 barrels.

¹ Includes Texas.

² Includes South Carolina.

³ Crop year beginning Apr. 1.

⁴ Includes South Carolina and Texas.
